

MBR MEMBRANE

- MBR Membrane Modules are designed to deliver superior solid-liquid separation in membrane bioreactor (MBR) systems for municipal and industrial wastewater treatment.
- Manufactured using reinforced PVDF membranes, they provide high permeability, excellent fouling resistance, and consistent treated water quality for reuse applications.

Key Benefits

- ✓ Superior filtration with excellent effluent quality
- ✓ High flux for increased treatment efficiency
- ✓ Reinforced PVDF membrane for enhanced durability
- ✓ Excellent fouling resistance and long service life
- ✓ Suitable for water reuse and recycling applications

WHY CHOOSE US?

- Cost-effective solutions
- Customized designs
- Premium fabrication
- Timely delivery
- Reliable after-sales support

TECHNICAL HIGHLIGHTS

- Nominal pore size: 0.2 μ
- Design flux: Up to 25 LMH
- High mechanical strength & chemical resistance
- Suitable for submerged MBR systems
- Ideal for municipal & industrial wastewater treatment and water reuse
